Chester is architecturally significant for possessing one of the finest and most massive sets of coupled exterior stacks in Virginia. The joining of exterior stacks into a single structure through the use of a pent closet was a fairly common practice in the late eighteenth century, but connections between stacks on two levels, as at Chester, is much rarer. Those on Chester and Waterville (King William County) are thought to be the only colonial specimens of this architectural feature to survive in Virginia.

Chester further stands as a well-preserved example of a more prodigious Southside colonial farmhouse. Its value as an architectural document is enhanced by the survival of nearly all of its original interior woodwork. that, though handsomely embellished with architectural features is somewhat provincial in design. Chester is currently undergoing renovation after passing through a period of neglect.
